

BEST PRACTICES

Throughout the year various training programmes are conducted in our institution which is orientation, practice teaching, games and sports competition, birthday of great persons, creative work such as music, drama, acting etc. Here on the one hand, students are engaged in learning, on the other hand, there is always a focus on how to make this teaching practice more creative for the students.

Therefore, during teaching practice it is also aimed how to improve teaching by using creative element and to engage children in classroom and make teaching more interesting.

However at present SCERT has taken over the administrative power of these institutions, the infrastructure of the institutions has been improved such as improving the quality of education through the appointment of faculty on the one hand, and improving the infrastructure of science lab, computer lab, psychological lab, library etc. to make teaching more scientific and technology based has also brought about a change is noticeable.

But from all these I think that during teaching practice when our students to teach this students in primary school, they learn from these various activities of their institutions. Thus a new horizon of teaching has been opened here.

All the techniques that will be taught are given below-

1. Mask can be used during Bengali, English practices teaching.
2. Drama can be used in teaching practices for stimulus variation.
3. A rhythmic life can be created in children through music.
4. Through the use of charts and models, students are helped to understand the various topics of the text book.
5. Observation of nature and various experiments in science to keep the children mind fresh and active and there by refine the senses.

Therefore, during the teaching practices, Bengali, English, science subjects can be presented to the students by focusing on the subject matter. Through chart or model or through drama motivation can be created, on the other hand the subject like geography can be represent used with chart or models.

If this is kept in focus then the quality of students will be maintained and the other hand good teachers will be produced.
